MOHAMMED SAIF

Senior Software Engineer | Full-Stack | Generative AI

Bengaluru, India | +91-9632137360 | imohdsaif.ai@gmail.com | linkedin.com/in/mohammedsaif001 | github.com/mohammedsaif001 | www.imohdsaif.in

PROFESSIONAL SUMMARY

Senior Software Engineer with around 4.5 years of experience building full-stack web applications and production Generative AI features for enterprise products. Architected an LLM-powered assistant on Azure OpenAI and the OpenAI Agents SDK with about 30 tools, exposed as an MCP server, and reduced its LLM cost with a router model and prompt caching. Built a citation-grounded RAG application end to end, and custom B2B storefront modules on the Microsoft Dynamics 365 Commerce React SDK. Skilled in React, Next.js, TypeScript, Node.js, PostgreSQL and Microsoft Azure. Leads sprint planning and code reviews, and mentors engineers.

TECHNICAL SKILLS

Generative AI: OpenAI Agents SDK, Azure OpenAI, Claude, Model Context Protocol (MCP), Retrieval-Augmented Generation (RAG), AI Agents, Tool Calling, Vector Search, Pinecone, Azure AI Search, Prompt Engineering, Prompt Caching, LLM Evaluation, Langfuse

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), Redux Toolkit, SWR, Tailwind CSS, SCSS, Material UI, shadcn/ui, HTML5, CSS3, GSAP

Backend: Node.js, Express, REST APIs, NextAuth, Prisma, Inngest, Microservices, Authentication and Role-Based Access Control

Databases: PostgreSQL, Azure Cosmos DB, MongoDB, Redis, SQL

Cloud and DevOps: Microsoft Azure, Azure DevOps, Docker, CI/CD, GitHub, Git

Enterprise Platforms: Microsoft Dynamics 365 Commerce, D365 Commerce React SDK, B2B eCommerce

Practices: Agile/Scrum, Sprint Planning, Code Review, Mentoring, Unit Testing, System Design

PROFESSIONAL EXPERIENCE

Senior Software Engineer — Nov 2024 – Present

Basofa Consulting Private Limited (Microsoft Certified Partner) | Bengaluru, India

- Architected and built an AI assistant for Microsoft Dynamics 365 B2B Commerce on Azure OpenAI and the OpenAI Agents SDK, with about 30 tools over live account, invoice, order, product and stock data; also exposed as an MCP server
- Reduced LLM cost per request by introducing a router model that loads only the tool groups each request needs, trimming prompts, merging tools and adding prompt caching, with LLM-as-judge evals and cost logging guarding quality
- Designed the assistant's safety flow: confirmation before any cart change, CSV and Excel bulk-order ingestion, and streaming responses with a Stop control
- Own the custom B2B storefront on the D365 Commerce React SDK: 6 custom modules for approvals, quotes, bulk ordering, product configuration, invoices and returns, shared themes and design tokens, and data actions over the Commerce endpoint
- Built a product-configurator assistant using intent parsing and Azure AI Search, and kept the codebase upgradable across SDK and Node upgrades with style linting and unit tests
- Delivered a financial reconciliation front end (Next.js, Material UI, SWR) with guided onboarding, field mapping, matching rules and versioned publishing
- Delivered a role-based software delivery portal end to end (Next.js, Azure Cosmos DB, Blob Storage, NextAuth): package publishing, customer entitlements, download audit logs, login lockout, email OTP verification and a CI/CD pipeline
- Run sprint planning and code reviews, and mentor a team of 5 engineers

Software Engineer — Apr 2023 – Nov 2024

Aarabhya Systems Pvt Ltd | Bengaluru, India

- Owned the front end of a Next.js platform with a 7-level role hierarchy, where each level adds, removes and monitors the users beneath it
- Built a medical-device training application with a mannequin animated in GSAP from live socket data

Software Engineer — Jul 2022 – Feb 2023

Nviera Technologies | Bengaluru, India

- Built React, Redux and ES6 front-end features for client web applications as part of an agile product team

PROJECTS

Grounded Brain AI Notebook — grounded-brain.imohdsaif.in | GitHub

- Built a full-stack RAG web app where users add PDFs, web pages, YouTube videos, GitHub repositories and markdown, then chat with them; every answer streams with inline citations to the exact passage, page or file
- Implemented durable ingestion with Inngest background workflows, live status and retries; vector search on Pinecone; PostgreSQL with Prisma; Google OAuth, rate limiting and per-user data isolation
- Added repo chat with re-sync on new commits and a generated developer wiki, a study studio producing seven validated material types (flashcards, quizzes, mind maps), editable per-user memory (Mem0) and rolling summaries for long chats
- Shipped with tests, CI, Langfuse tracing on every LLM call and a production container build on Azure

Agent SDK Built From Scratch — GitHub

- Built a TypeScript LLM reasoning loop that requests one JSON step at a time, with Zod-validated tool calls and structured error feedback so the model self-corrects and retries
- Implemented multi-agent handoffs with shared conversation history and guardrails at input (prompt injection, PII masking), tool call (destructive commands) and output (secret redaction)

EDUCATION

Bachelor of Engineering, Computer Science and Engineering — 2018 – 2022

Presidency University, Bengaluru
